

Cataloging Software for the Power User

Works with any ILS and any MARC source

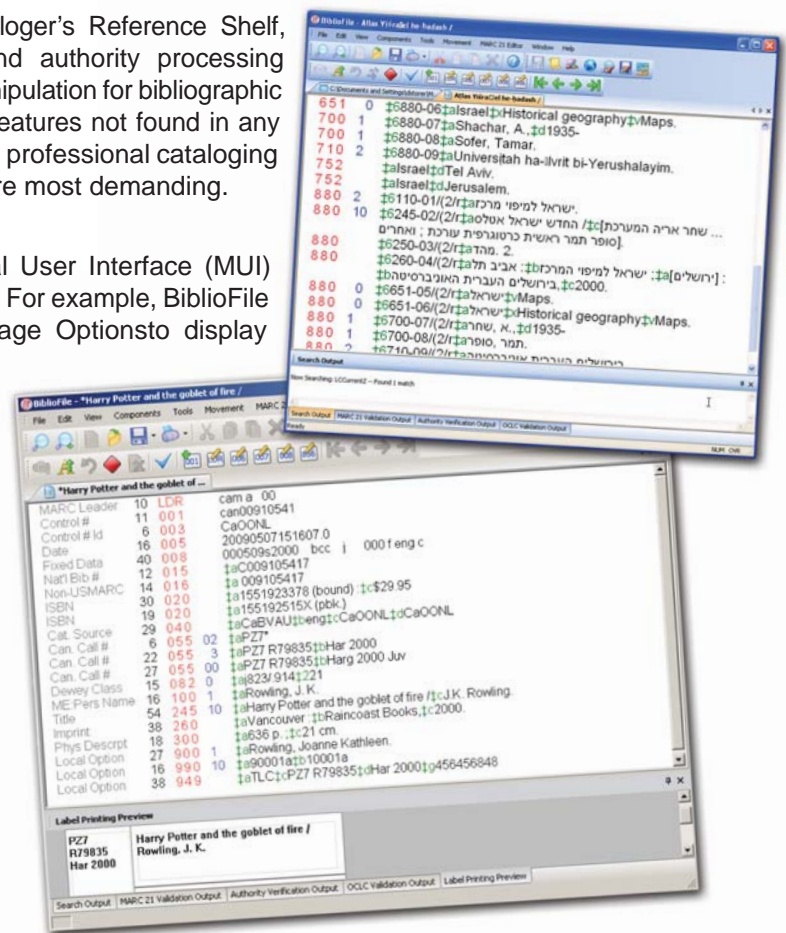

The new BiblioFile includes the context sensitive Cataloger's Reference Shelf, powerful data manipulation features, local database and authority processing control, MARC record validation, macro scripting, data manipulation for bibliographic and authority records, label printing and other advanced features not found in any other cataloging program. BiblioFile is the first choice of the professional cataloging organizations where productivity and quality standards are most demanding.

Office Suite Features Extended

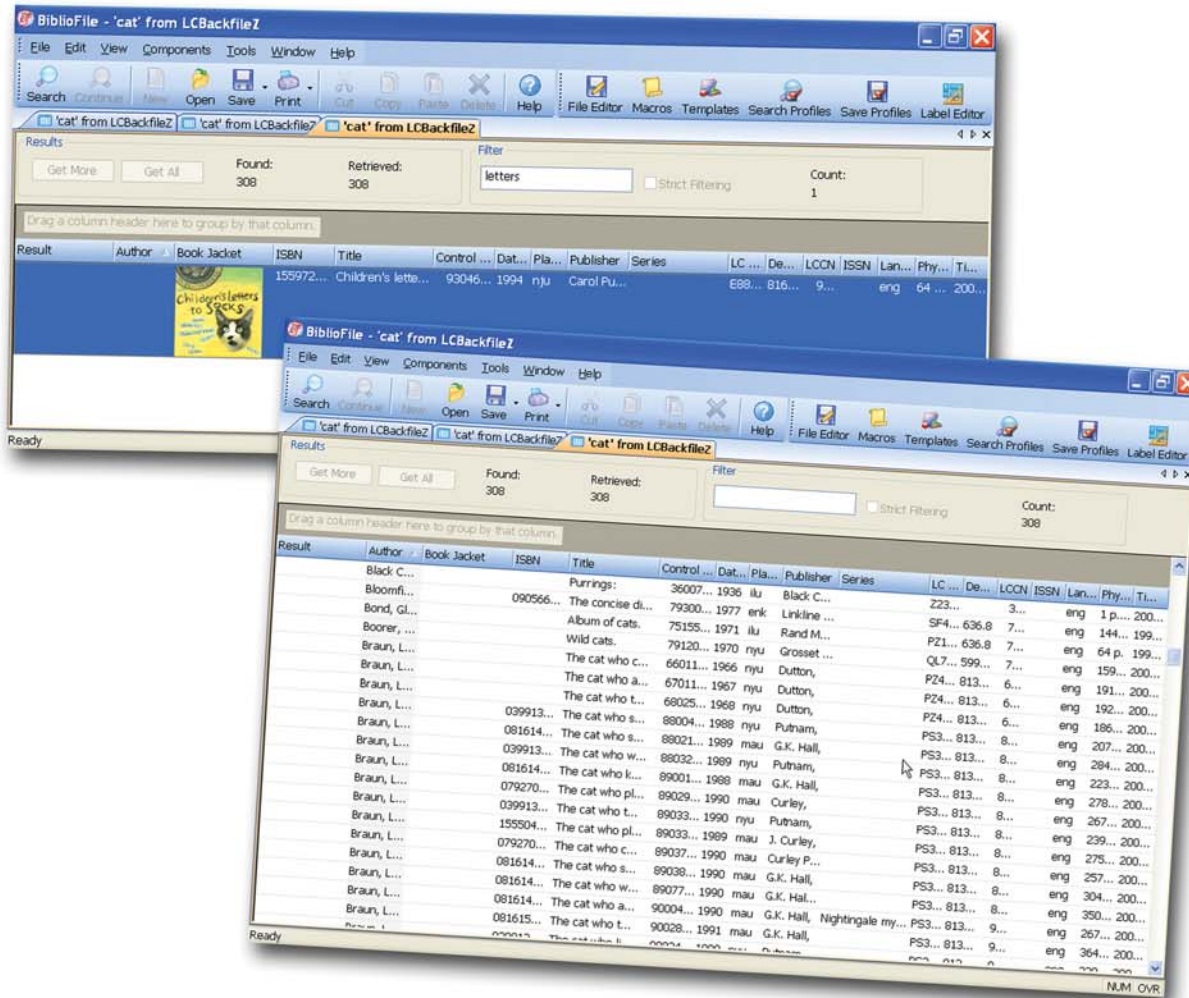

BiblioFile takes full advantage of Windows® Multilingual User Interface (MUI) technology to incorporate and extend Office Suite features. For example, BiblioFile makes creative use of Windows Regional and Language Options to display Unicode characters without changing fonts.

Additional Features:

- Full ISBN-13 support
- Find or Browse searching, Boolean support, 37 access points, and pre-configured support for U.S. National Profile compliant Z39.50 servers. BiblioFile remembers your default search preferences and preferred data sources.
- Diacritics appear as they will appear in your OPAC and support all Unicode characters specified in MARC21.
- Enhanced result set manipulation. Add, remove, group, collapse, resize, or sort any column.
- New indexes. "Find Any" searches all text and numeric fields. "Standard Number" searches numeric fields, plus 19 other indexes.
- Instant MARC21 validation as you type.
- Automatic Unicode conversion to and from MARC-8 and UTF-8.
- Information panes provide instant feedback on critical processes, including MARC 21 and OCLC validation, search progress, and authority verification. Panes can be undocked and displayed on a second monitor, if the user's hardware supports it.

- Advanced result set filtering that allows you to enter secondary search terms to limit the results that appear. Results will be limited to records that contain your search term.

ITS•MARC: Online Record Resource for BiblioFile

You can use the features of BiblioFile along with online access to the 30 million MARC records in ITS•MARC. (This figure includes basic ITS•MARC, and add-on, premium databases.)

Authority Records

You can add TLC Authorities to ITS•MARC via the program's Z39.50 client. Included are LC Names and Subjects, Sears Subjects, and Medical Subject Headings.

For more information or a free 30-day trial of BiblioFile visit TLCdelivers.com/save or call TLC at 1.800.325.7759.
